OUR 3 PLANTS DO THE WORK OF 25 MILLION TREES.

It takes 25 million trees to remove 250 million kg of CO₂ emissions from the air. While it takes just three Qatar Cool plants (working at full capacity) to do just the same. Thanks to the latest district cooling technology, our plants use 40-60% less energy than conventional cooling systems, yet offer more efficiency and reliability. Just a few reasons why we’re the leading district cooling company in Qatar.
